Practical 1

Aim: Use graphical method to solve the following LPP:

$$\begin{aligned}\text{Max } Z &= 3x + 5y \\ \text{w.r.t.} \\ x + 2y &\leq 2000, \\ x + y &\leq 1500, \\ y &\leq 600, \\ x, y &\geq 0\end{aligned}$$

Source Code:

```
require(lpSolve)

C ← c(3, 5)

A ← matrix(c(1, 2,
             1, 1,
             0, 1), nrow = 3, byrow = T)

B ← c(2000, 1500, 600)

constraint_direction ← c("≤", "≤", "≤")

plot.new()
plot.window(xlim = c(0, 2000), ylim = c(0, 2000))
axis(1)
axis(2)
title(main = "LPP using graphical method", xlab = "X-axis", ylab = "Y-
axis")
box()

segments(x0 = 2000, y0 = 0, x1 = 0, y1 = 1000, col = "green")
segments(x0 = 1500, y0 = 0, x1 = 0, y1 = 1500, col = "red")
segments(x0 = 0, y0 = 0, x1 = 600, y1 = 0, col = "blue")

z ← lp(direction = "max",
```

```

objective.in = C,
const.mat = A,
const.dir = constraint_direction,
const.rhs = B,
all.int = T
)

```

```
print(z$status)
```

```

best_sol ← z$solution
names(best_sol) ← c("x1", "x2")
print(paste("Total cost: ", z$objval, sep = ""))

```

Output:

```

> # Use graphical method to solve the following LPP:
> # Max z = 3x + 5y

Practical 9

Aim: Solve following transportation problem in which each cell represents unit costs:

	Customers				Supply
	1	2	3	4	
Suppliers	10	2	20	11	15
	12	7	9	20	25
	4	14	16	18	10
Demand	5	15	15	15	

Source code:

```
library(lpSolve)
cost ← matrix(c(10, 2, 20, 11,
                12, 7, 9, 20,
                4, 14, 16, 18), nrow = 3, byrow = T)

colnames(cost) ← c("Customer 1", "Customer 2", "Customer 3", "Customer 4")
rownames(cost) ← c("Supplier 1", "Supplier 2", "Supplier 3")

row.signs ← rep("≤", 3)
row.rhs ← c(15, 25, 10)

col.signs ← rep("≥", 4)
col.rhs ← c(5, 15, 15, 15)

total.cost ← lp.transport(cost, "min", row.signs, row.rhs, col.signs, col.rhs)
total.cost$solution
print(total.cost)
```

Output:

```
> ##SOLVE FOLLOWING TRANSPORTATION PROBLEM IN WHICH CELL ENTRIES REPRESENT UNIT COSTS USING R PROGRAMMING.
>
> #           "Customer 1", "Customer 2", "Customer 3", "Customer 4"  SUPPLY

> rownames(cost) <- c("Supplier 1", "Supplier 2", "Supplier 3")
>
> row.signs <- rep("<=", 3)
> row.rhs <- c(15, 25, 10)
>
> col.signs <- rep(">=", 4)
> col.rhs <- c(5, 15, 15, 15)
```

```
> total.cost <- lp.transport(cost, "min", row.signs, row.rhs, col.signs, col.rhs)
> total.cost$solution
      [,1] [,2] [,3] [,4]
[1,]    0    5    0   10
[2,]    0   10   15    0
[3,]    5    0    0    5
> print(total.cost)
Success: the objective function is 435
```

Practical 10

Aim: Solve following assignment problem represented in this matrix:

		Jobs		
		1	2	3
Workers	1	15	10	9
	2	9	15	10
	3	10	12	8

Source Code:

```
library(lpSolve)

cost <- matrix(c(15, 10, 9,
                 9, 15, 10,
                 10, 12, 8), nrow = 3, byrow = T)

cost
answer <- lp.assign(cost)
answer$solution
```

Output:

```
> #SOLVE FOLLOWING ASSIGNMENT PROBLEM REPRESENTED IN FOLLOWING MATRIX USING R PROGRAMMING
> # Assignment Problem
> #      JOB1    JOB2    JOB3
> #W1     15     10     9
> #W2     9      15     10
> #W3     10     12     8
>
> library(lpSolve)
>
> cost <- matrix(c(15, 10, 9,
+                 9, 15, 10,
+                 10, 12, 8), nrow = 3, byrow = T)
>
> cost
      [,1] [,2] [,3]
